SEPTEMBER 2011 ISSUE 12

FEATURE: IVMS IDEAL SAFETY SOLUTION FOR QUARRYING AND MINING SECTOR

It is not uncommon for mining and quarrying employees to be working alone in remote & hazardous terrain. Unfortunately employees within these industries are at risk of accidents and incidents involving company vehicles leading to injury, expensive vehicle damage, high maintenance on goings and sadly fatality.

Fortunately Future Fleet provides businesses, within the mining and resource sector, with a total solution customised to support various health and safety regulations. The Future Fleet IVMS Mining Solution and Mandown Solution is specifically designed for driver safety, fatigue management and emergency mandown.

FUTURE FLEET IVMS SOLUTION BENEFITS:

- Real-time vehicle tracking and hazardous area alerts
- Mine site map overlays, up to date mapping imagey of mine sites
- Monitor driver behaviours, manage excessive speeding in geo-fences, harsh braking and much more
- Enhance driver safety and awareness
- Know where your staff are in emergencies
- Faster response times to emergency situations
- Movement in and out of restricted areas

Future Fleet IVMS and Mandown Solutions are rugged in design and include a Next G smart tracking device with optional satellite coverage. This ensures total coverage in the remotest of areas. The solution comes with an emergency man down transmitter, in vehicle emergency alert button/switch, driver behaviour alerts and reports, accident or incident alerts and reports, G force sensor and Geo-boundary 'No Go' Danger Zone alerts and reports. The solution is also fully compliant with Santos.
