

# MiX SafeDrive (Online Driver Training & Consultancy)

Safety, collisions, injuries and associated liabilities are serious concerns in organisations that depend on their drivers. Ongoing consultancy, training and monitoring are essential for the effective management of your drivers' safety. MiX SafeDrive is a consultancy and web-based driver training application that will reduce this concern by helping to identify, mitigate and manage driver risk. MiX SafeDrive is ideal for implementation by fleet managers, HSE manager, risk managers, finance managers and even HR managers.

## When are your employees most vulnerable?

According to *www.trafficsafety.org*, the most dangerous part of the day for any employee is the time they spend in their vehicle, with **a crash occurring every 5 seconds, property damage occurring every 7 seconds, an injury occurring every 10 seconds and a motor vehicle fatality occurring every 12 minutes.**

### In-depth knowledge and industry expertise

MiX SafeDrive consultants have the industry expertise to assess and advise on all aspects of land transport operations, and make recommendations for Road Safety Management Systems.

- **Roll Over Protection:** Advice on the need for additional Roll Over Protection (ROP), required in cases where Equipment Manufacturer (OEM) vehicle roof strength is insufficient.

### Online Driver Training and its components

The web based service requires a computer with internet access and a MiX SafeDrive licence. Users log into the system and access the following components:

- **Message from the CEO:** A personalised video to staff, explaining the need to help reduce driving risk.
- **Hazard Perception Evaluation (HPE):** An interactive assessment tool that identifies risks and assigns appropriate training modules aimed at correcting driver behaviour.
- **Training modules:** Targeted training modules, as individually assigned from the HPE.
- **Policy testing:** An optional but recommended component that reinforces existing driving policies and the need for driver training.

### Reduce collisions, improve safety

After putting drivers through HPE, those at risk of being involved in a collision are identified and prescribed specific training modules designed to improve driver awareness and safety. If policies are in place, drivers can undergo policy testing and additional training as needed.

## MiX SafeDrive features:

- **Convenient access**  
Web-based training allows for learning anywhere at anytime.
- **Easy deployment**  
Suited to any company that employs drivers, in any industry. It is also easy to implement.
- **Cost effective**  
Affordable, with few infrastructure costs, and cost effective.
- **Stimulating learning environment**  
Interactive, stimulating and realistic HPEs with 20 available HD driving scenarios.
- **Modern learning practices**  
20 minute targeted modules, the proven attention span for adults
- **Localised content**  
Material is localised, available in 45 countries and 55 different languages
- **Policy platform capabilities**  
Policy tests can be designed and set up, thereby reinforcing existing safe driving practices. Existing policies can be uploaded or we can help to develop one.

## About MiX Telematics

MiX Telematics is a leading global provider of fleet and mobile asset management solutions, delivered as Software-as-a-Service or SaaS, to customers in over 120 countries

## About Future Fleet

Future Fleet is a leading Australian provider of GPS fleet and asset management solutions across all industries including transport and logistics, service, bus and coach and government. With over 30 years GPS technology and telecommunications experience, Future Fleet delivers customised solutions tailored to suit your business.

**Overall long-term results show a 30% average reduction in collisions, while more extensive case studies show as much as a 63% reduction.**
