

MiX Insight Agility

Fast, easy and flexible reporting using MS Excel

Generating reports can be bittersweet. They're businesscritical but sometimes frustrating to compile and tedious to set up. Creating layouts with trends and graphical information can also be time-consuming.

MiX Telematics is taking reporting to the next level with MiX Insight Agility, an extension to the MiX Insight Reports suite that allows for dynamic data interaction in Microsoft Excel. Unlike static reports, users finally have the power to create and shape customised reports in the format they prefer.

Reporting in your own hands

MiX Insight Agility is easily accessible to existing MiX Insight Report users and requires no additional licences like most other business intelligence (BI) tools. The functionality is simply enabled on request via the MiX Fleet Manager or MiX SafeDrive software platforms.

Once enabled and permissions are assigned, an Excel template populated with fleet and driver data is sent to the user – once off. Users can then use familiar Microsoft Excel tools like PivotTable, PivotChart, Timeline and slicers to analyse data and create interactive applications. The Excel template comes complete with detailed instructions.

And, best of all, once the spreadsheet has been generated, there is no need to recreate it. Instead, it can be instantly refreshed at the touch of a button.

Fast, easy and flexible

MiX Insight Agility is ideal for users who are looking for true autonomy in their reporting as well as new, more exciting and cost-effective ways of analysing data.

Reports and ad-hoc queries can now be created without the need for manual requests for assistance or report development. This eliminates dependencies on report subscriptions, increases productivity and saves time.

Once in place, reports are compelling and easy to alter or enhance, allowing users to customise their analyses to their own needs. Reporting has never been faster, easier or more effective than with MiX Insight Agility from MiX Telematics.

MiX Insight Agility Features

No separate sign-ups

MiX Insight Agility is an extension of MiX's current reporting suite and uses Microsoft Excel as the user interface. As such, it is accessible, easy to use and flexible.

All the how-to's

The Excel template contains detailed instructions, a glossary, links to useful videos, and instructions on how to create PivotTables, PivotCharts and more. Support requests can be logged via MiX Assist.

A variety of data fields

Users can explore and analyse a number of areas relating to their data, which can then be easily transformed using familiar tools in Excel to create the desired format and layout.

Compatible with Excel and other BI tools

MiX Insight Agility is exclusively built for use with Microsoft Excel. Various plug-ins and data connectors are available for other BI tools on request.
